

Keras Installation

- Keras supports both Python 2.7 and Python 3.3+.
- For installing Keras Library on Anaconda environment after activating the environment follow the instructions below:

CPU Users:

1. `conda install -c conda-forge keras`

GPU Users:

1. Go to this link <https://blog.paperspace.com/running-tensorflow-on-windows/> for installing Tensorflow library for GPU
2. `conda install -c anaconda keras-gpu`

For more information go through this link:
